

UCT898:CAPSTONE PROJECT

L	T	P	Cr
-	-	-	08

Course Objectives: To facilitate the students learn and apply their earned skill set for the system development life cycle in Computer Science and Business Systems. As a part of a team, the students will make a project, which emphasizes hands-on experience, and integrates analytical, design, and development skills. The idea is to provide an opportunity to the students to apply what they have learned throughout the course of graduate program by undertaking a specific problem.

Course Description: This course is of six months and is taken by the student not opting project semester at some software company or research institute. Capstone Project is increasingly interdisciplinary, and requires students to function on multidisciplinary teams. It is the process of devising a system, component or process to meet desired needs. It is a decision-making process, in which the basic sciences, mathematics, and the engineering are applied to convert resources optimally to meet the stated needs. It typically includes both analysis and synthesis performed in an iterative cycle. As part of their design experience, students have an opportunity to define and determine the problem and its scope. The project demonstrates that students have adequate exposure to design, as defined, in engineering contexts. The program must clearly demonstrate where standards and constraints are taught and how they are integrated into the design component of the project. Each group will have 1-4 students, and one of them is working as team leader. Team lead is having an additional responsibility for maintaining the daily diary. Each Group will work under mentorship of a faculty supervisor as assigned by the department.

Each group must meet the assigned supervisor till the end of the semester (record of attendance will be maintained), as per the time slot which will be provided to them by the respective supervisor. This is mandatory requirement for the fulfillment of the attendance as well as the successful completion of the project. The faculty supervisor of the project will continuously judge the development of the workings of the assigned groups.

Course Learning Outcomes (CLOs) / Course Objectives (COs):

After the completion of the course, the student will be able to:

1. Develop skills necessary for time management, reporting and carrying out projects within an organization/industry.
2. Design, develop, debug, document, and deliver automated solutions for real world problems and learn to work in a team environment.
3. Develop technical report writing and verbal communication skills.
4. Experience contemporary computing systems, tools and methodologies and apply experimental and data analysis techniques to the software projects.
5. Apply interdisciplinary fundamentals to the software projects taking into account professional and ethical issues.
