Time Value of Money: Meaning, principle, calculations, interest rates, importance of interest rates, importance of different types of interest rates and returns.

Valuation: Introduction to valuation, valuation of stocks, valuation of bonds, methods and techniques.

Laboratory Work: To gain an understanding of proprietary software for international derivatives

1. Introduction to proprietary software.
2. Detailed understanding of basic features of proprietary software.
3. Understanding order types and their implementation
4. Regular practice to understand execution of basic strategies.
5. Introduction to trading and investment.
6. Introduction to analytical methods

Course Learning Objectives (CLO)

The students will be able to:

- 1 Evaluate the performance of AM and FM modulator and demodulator.
- 2 Analyze the concept of different pulse modulation techniques.
- 3 Assess the discrete PAM signals and the efficacy of baseband shaping in reducing ISI during baseband data transmission, while also examining how correlative coding leverages ISI for achieving high data rates.
- 4 Perform statistical analysis of the transmitted and received modulated waveforms from estimation and detection point of view.
- 5 Evaluate the performance of digital modulation techniques of digital communication system operating over AWGN channel
- 6 Analyze the concepts of channel coding to mitigate the effects of interference and noise in the channel.

Recommended Prerequisites: Basics of Microsoft Excel
