

## SEMESTER-III

| UMT308: THEORY OF MACHINES                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |   |   |    |     |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---|---|----|-----|
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | L | T | P  | Cr  |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 3 | 1 | 2* | 4.0 |
| <p><b>Course Objective:</b> To introduce different types of mechanisms forming different subsystem of machines. To impart the knowledge of vector and matrix methods for position, velocity and acceleration analysis with software tools. This course deals with the dynamics of various physical systems like flywheels, governors, gyroscopes etc.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |   |   |    |     |
| <p><b>Syllabus</b></p> <p><b>Kinematics of Machines:</b> Introduction to linkages, Gears, Cam mechanics, belts and rope, as subsystems of machines.</p> <p><b>Linkage Mechanisms:</b> Links, kinematic pairs, degree of freedom, inversions, mechanisms, transmission angle and mechanical advantage. Graphical and analytical methods for position, velocity and acceleration analysis.</p> <p><b>Static and Dynamic force analysis in mechanisms:</b> Static equilibrium, Equivalent dynamical systems, Static and dynamic analysis of slider-crank mechanisms and engine force analysis.</p> <p><b>Balancing:</b> Balancing of rotating and reciprocating masses, single cylinder and multi-cylinder in-line engines, Field balancing of rotors.</p> <p><b>Flywheel and Governors:</b> Turning moment diagram of the engines, Flywheel design, Types of governors and their applications.</p> <p><b>Gyroscopes:</b> Gyroscopic action in automobiles, gyroscopes and their role in stabilization in ships, and airplanes.</p> |   |   |    |     |
| <p><b>Laboratory Work (if applicable)</b></p> <p>Students shall perform experiments based on</p> <ol style="list-style-type: none"> <li>1. Centrifugal force</li> <li>2. Slider Crank mechanism.</li> <li>3. Cam and follower mechanism.</li> <li>4. Balancing of rotating and reciprocating masses</li> <li>5. Gyroscopic effect</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |   |   |    |     |
| <p><b>Course Learning Outcomes (CLOs)</b></p> <p>The students will be able to:</p> <ol style="list-style-type: none"> <li>1. select and analyze a set of mechanisms to achieve desired motion transformation.</li> <li>2. apply graphical and/or analytical methods to determine position, velocity, and acceleration in planar mechanisms.</li> <li>3. perform static/dynamic force analysis of mechanisms using principles of static equilibrium/equivalent dynamical systems.</li> <li>4. evaluate and carry out balancing of rotors or reciprocating masses.</li> <li>5. apply engineering principle of mechanics to design motion transmission devices and flywheels.</li> <li>6. determine the appropriate parameters for stability of a vehicle using the concept of gyroscopic action.</li> </ol>                                                                                                                                                                                                                        |   |   |    |     |

*Approved in 109<sup>th</sup> meeting of the Senate held on March 16, 2023. Revised in 112<sup>th</sup> and 113<sup>th</sup> meeting of the Senate held on March 11 and September 7, 2024, respectively. Further, revision Approved in 1<sup>st</sup> meeting of Academic Council held on September 11, 2025.*
